

Question 1 (Elmasri & Navathe: Chapter 6: 6.14)

Using the above schema for the LIBRARY database, provide one example for each of the following.

***Note:** the only difference between the above schema and the ones taught in class is the ways foreign keys' references are shown. Instead of writing them down, this one uses arrows, e.g., we have BOOK_LOANS.Card_no → BORROWER.Card_no.
